ELECTRONIC IRON SCALE MOD. B.PFE.4

PAINTED MODEL

- Single structure platform scale designed for bar weighing
- The platform scale is also equipped with legs that carry the load surface at a height of approximately 70 cm
- The weighing is performed by 4 bending load cells with IP 65 protection. These cells lean on a sphere support that is in turn supported by a custom shock absorber
- This set is inserted in a secondary frame that follows the perimeter of the platform and on which the stoppers and anti-release screws are fastened; because of these specifications, it is a gently fluctuating platform scale that resists any vertical or lateral movement
- The static overload resistance is 100% of the capacity
- The connection cable for the weight indicator is approximately 5 m.

CE

OPTIONAL ACCESSORIES

EXTRACTABLE ARMS
500 mm per part

DIMENSIONI E PORTATE DISPONIBILI

Dimensions in cm	Capacity in kg	Unit in gr
200 X 200	1,500	500
